

STONESTRONG AUSTRALIA TRAFFIC BARRIERS TO NZTA REQUIREMENTS

- Standard NZTA F shape Traffic Barrier – detailed for standard barrier reinforcement with additional impact strength from block webs.
- Standard F shape 810mm high with additional 110mm in base of block for added embedment.
- Block designed to be integral element of roadside retaining wall (either gravity or MSE dependant on wall height and retained slope conditions).
- Can be installed on 1.1m or 1.6m wide blocks.
- Top block version available to allow for alternative steeper vegetated facings above block, sloping road gradients accommodated with tapered block step down.
- Can be used as “Pile Through” blocks to accommodate high TL4, TL5 & TL6 barrier loads where used between opposing lanes – 550mm diameter piles at 1.22m centres.
- Rapid construction, minimum installation width and one pass construction.
